1. Product Vision

INGLU EMS is a single, cloud-based system of record for everyone who works at INGLU — full-time employees and interns alike — across every function the agency runs: Influencer Marketing, Campus Ambassador Programs, Brand Activations, Events, Talent Management, Community Management, Sales, Operations, HR, and Marketing.

Problem it solves: INGLU currently coordinates HR, attendance, payroll, tasks, leads, and social submissions through scattered spreadsheets, WhatsApp, and email. This creates blind spots for the Founder and HR, delays in payroll/deductions, inconsistent onboarding, and no single view of who is doing what.

Product goals:

- One login, one identity, role-based views for every function in the company.
- Automate everything that is currently manual and repetitive (ID generation, offer letters, payroll deductions, lead assignment, reminders).
- Give the Founder and Department Heads a real-time pulse of the organization (attendance, tasks, leads, submissions, performance) without asking anyone.

- Make HR operations (recruitment → onboarding → attendance → leave → payroll → performance → exit) run inside one connected pipeline instead of disconnected tools.
- Support INGLU's unique operating model: a large, rotating intern base alongside a smaller permanent staff, with content/social submission tracking as a first-class HR function (not just a marketing tool).

Design north star: Feel like Linear (speed, keyboard-first, clean typography), Notion (flexible information architecture), ClickUp (task/board views), Zoho People + Rippling (HR depth), and HubSpot (CRM/pipeline clarity) — but purpose-built for a youth marketing agency's workflow.

2. User Roles

Eight roles, strictly hierarchical for approvals but with cross-cutting access for HR/Finance where legally or operationally required.

Role	Who they are	Scope of authority
Founder	Company owner(s)	Full visibility, no operational data entry required. Read access to everything; can override any approval.
Super Admin	Ops/IT lead who configures the system	Full configuration access (Settings module), user provisioning, role assignment, integrations. Not necessarily an approver in HR workflows.
HR	HR Manager / HR Executive	Full control of Recruitment, Onboarding, Attendance, Leave, Performance, Knowledge Base, Announcements. Read access to Payroll (initiates, Finance approves disbursement).
Finance	Accounts/Finance Manager	Full control of Payroll module, Salary Structures, Invoices/Payments in CRM, Budget fields in Operations. Read-only on HR personal data.
Department Head	Head of a function (e.g. Head of Influencer Marketing)	Full visibility of their department's people, tasks, leads, performance. Approves leave/performance/exceptions for their department. Cannot see other departments' salary data.

Role	Who they are	Scope of authority
Team Lead	Manages a pod/team inside a department	Approves tasks, daily reports, and social submissions for their direct reports. Limited leave-approval delegation. No salary visibility.
Employee	Full-time staff	Self-service: own profile, attendance, leave, payroll (view only), tasks, daily reports, CRM/leads if sales-facing, social submissions if content-facing.
Intern	Interns / campus ambassadors	Same self-service surface as Employee, minus Payroll (stipend view only) and Asset issuance history limited to their own items. Cannot view CRM financials.

Role → module access (summary; full detail in [Section 10 — Permissions Matrix](#))

Module	Founder	Super Admin	HR	Finance	Dept Head	Team Lead
Dashboard	Org-wide	Org-wide	HR view	Finance view	Dept view	Team view
Recruitment (ATS)	View	Config	Full	—	View own dept	View own dept
Onboarding	View	Config	Full	View (salary setup)	Approve	—
Employee Profile	View all	View all	Full (all)	View (salary tab)	View (dept)	View (team)
HRMS/Attendance	View all	Config	Full	View	Dept reports	Team reports
Leave	View all	Config	Full	View	Approve (dept)	Approve (team)
Payroll	View	Config	Initiate	Full	View own team's summary	—

Module	Founder	Super Admin	HR	Finance	Dept Head	Team Lead
Performance	View all	Config	Full	—	Full (dept)	Rat (te
Daily Work Report	View	—	View	—	Review (dept)	Re (te
Task Management	View	Config	View	—	Full (dept)	Ful (te

Announcements	Post	Post	Post	—	Post (dept)	—
Reports	Full	Full	HR reports	Finance reports	Dept reports	Tea rep
Settings	View	Full	HR policies	Salary templates	—	—

3. Navigation Structure

Primary navigation: Left sidebar, collapsible, icon+label. Persistent across the app. Grouped into 5 clusters mirroring how INGLU actually works.

MY WORK	
▸ Tasks	
▸ Timesheet	
▸ Daily Report	
▸ Social Submissions	
▸ Leaves	
PEOPLE	
▸ Employee Directory	
▸ Recruitment (ATS)	
▸ Onboarding	
▸ Attendance	
▸ Performance	
▸ Payroll	
BUSINESS	
▸ CRM	
▸ Leads	
▸ Operations	
RESOURCES	
▸ Assets	
▸ Knowledge Base	
▸ Announcements	
▸ Reports	
▸ Settings	
[Avatar] Name ▾ (Logout)	

- Sidebar items are **rendered dynamically per role** — an Intern never sees "Payroll → Salary Structure," a Team Lead never sees "Settings."
- **Top bar** (persistent, all roles): Global search (🔍), Notification bell, Quick-add (+) for Task/Leave/Report, Profile menu.
- **Mobile:** Sidebar collapses to a bottom tab bar with 5 slots — Home, Tasks, Attendance, Notifications, Profile — plus a "More" drawer for everything else.

4. Information Architecture

INGLU EMS

6. Screen-by-Screen Wireframes

Format for every screen: Purpose · Access · Navigation Path · Desktop Wireframe (ASCII) · Mobile Layout · Components · User Actions · Backend APIs · DB Tables.

6.1 Login & Access

Screen: Login

- **Purpose:** Authenticate all user types into a single entry point.
- **Access:** Public (unauthenticated).
- **Navigation Path:** `app.inglu.com/login` (root)

Desktop Wireframe:

Sign in to INGLU EMS

Email / Employee ID

Password

☐ Remember me [Forgot?](#)

— or —

© INGLU · [Privacy](#) · [Terms](#) · [Help](#)

Mobile Layout: Single-column, logo top-center, form fields full-width, buttons full-width, stacked vertically, OTP login link below primary CTA.

Components: Text input (email/ID), password input with visibility toggle, checkbox, primary button, secondary/text button, link, toast (error), footer links.

States:

- *Empty:* Fields blank, CTA disabled until both fields filled.
- *Error:* Red inline message "Incorrect email or password" + shake animation on form card; account lock warning after 5 failed attempts.
- *Success:* Redirect to role-based Dashboard.

User Actions: Enter credentials → Submit → (success) redirect to Dashboard; (failure) show inline error; click "Forgot?" → Forgot Password screen; click "Login with OTP" → OTP Login screen.

Backend APIs: `POST /auth/login`, `POST /auth/lock-check`

DB Tables: `users`, `login_attempts`, `sessions`, `roles`

Screen: OTP Login

- **Purpose:** Passwordless login via mobile/email OTP — primary path for interns who may forget passwords.
- **Access:** Public.

- **Navigation Path:** /login/otp

Desktop Wireframe:

```

| Login with OTP |
|
| Registered Mobile/Email |
| [ _____ ] |
|
| [ Send OTP ] |
|
| --- after send --- |
| Enter 6-digit OTP |
| [ ][ ][ ][ ][ ][ ] |
| Resend OTP in 00:30 |
|
| [ Verify & Login ] |

```

Mobile Layout: Same structure; OTP boxes auto-advance focus; supports SMS autofill.

Components: Input, OTP-box group (6 segments), countdown timer, primary button, resend link (disabled during countdown).

States: Empty → Sending (spinner on button) → OTP sent (boxes active) → Verifying → Success (redirect) / Error ("Invalid OTP", 3 attempts then lock 15 min).

User Actions: Enter identifier → Send OTP → Enter OTP → Verify.

Backend APIs: POST /auth/otp/send , POST /auth/otp/verify

DB Tables: otp_requests , users

Screen: Forgot Password / Reset Password

- **Purpose:** Self-service password recovery.
- **Access:** Public.
- **Navigation Path:** `/login/forgot` → email link → `/login/reset?token=`

Desktop Wireframe (Forgot):

```
| Reset your password |  
| Enter your registered email |  
| [ ] |  
| [ Send Reset Link ] |
```

← Back to Login

Desktop Wireframe (Reset):

Set a new password	
New Password	
[_____]	
Confirm Password	
[_____]	
Rules: 8+ chars, 1 number,	
1 special character	
[Update Password]	

Components: Input, password strength meter, primary button, link.

States: Link expired (error screen, "Request a new link"), success (auto-redirect to Login with success toast).

Backend APIs: `POST /auth/password/forgot`, `POST /auth/password/reset`

DB Tables: `password_reset_tokens`, `users`

Screen: First-Time Login

- **Purpose:** Force password change + profile completion for every newly onboarded user before they can access the app.
- **Access:** Any role, one-time (flag `first_login=true` on `users`).
- **Navigation Path:** Auto-redirect after first successful login with temporary credentials.

Desktop Wireframe:

Welcome to INGLU, [First Name]! (1/3)	
Step 1: Set your password	
[New password] [Confirm password]	
[Next →]	
Step 2: Confirm your details (2/3)	
Phone [_____] Emergency Contact [_____]	
Address [_____]	
[← Back] [Next →]	
Step 3: Upload required documents (3/3)	

```
| [Upload: ID Proof] [Upload: Address Proof] |
| [Upload: Bank Passbook/Cancelled Cheque] |
| [- Back] [ Finish ] |
```

Mobile Layout: Full-screen step wizard, one step per screen, progress dots at top, sticky bottom CTA.

Components: Stepper/progress indicator, password inputs, text inputs, file upload dropzones, primary/secondary buttons.

User Actions: Complete all 3 steps sequentially → Finish → redirect to role-based Dashboard with a "Welcome tour" tooltip overlay (dismissible).

Backend APIs: POST /auth/password/set , PATCH /users/{id}/profile , POST /documents/upload

DB Tables: users , employee_profiles , documents

6.2 Dashboards

Dashboards are **role-variant** — same shell, different widget sets (see [Section 8](#) for full widget catalog).

Screen: Founder Dashboard

- **Purpose:** Org-wide real-time pulse — no data entry, pure oversight.
- **Access:** Founder only.
- **Navigation Path:** /dashboard (default landing for Founder role)

Desktop Wireframe:

+ attendance %]	
Recent Announcements	Upcoming Birthdays
• ...	• [Avatar] Name – 12 Jul
Pending Approvals Requiring Founder Override (0)	

Mobile Layout: Metric cards in horizontal-scroll carousel; charts stack full-width below; collapsible sections for secondary widgets.

Components: KPI cards, bar/heatmap charts, list widgets, notification bell with badge, avatar menu.

Empty State: If no data yet (new org) → "Your organization dashboard will populate as your team starts logging in" with illustration.

Backend APIs: GET /dashboard/founder-summary , GET /dashboard/dept-status , GET /dashboard/performance-heatmap

DB Tables: Aggregated views across attendance , employees , leads , invoices , performance_scores

Screen: HR Dashboard

- **Purpose:** Day-to-day HR operations pulse.
- **Access:** HR role.

Desktop Wireframe:

Mobile Layout: Clock In/Out becomes a large sticky button at top; widgets stack; quick-action buttons pinned to bottom as floating action buttons.

Backend APIs: GET /dashboard/self-summary, POST /attendance/clock-in, POST /attendance/clock-out

DB Tables: attendance, leave_balances, tasks, payroll_slips

6.3 Recruitment (ATS)

Screen: Pipeline Board

- **Purpose:** Kanban view of every open role's candidates by stage.
- **Access:** HR (full), Founder/Dept Head/Team Lead (view own dept).
- **Navigation Path:** People → Recruitment (ATS) → Pipeline

Desktop Wireframe:

Recruitment [Job: Content Intern ▼] [Dept: All ▼] [+ New Role]						
Applied (24)	Screened (12)	Interview (6)	Assignment (4)	Offer (2)	Hired (1)	
[Card]	[Card]	[Card]	[Card]	[Card]	[Card]	

Name	Name	Name	Name	Name	Name
Role · CV	Score: 8	Slot: Fri	Due: Mon	Sent 2d	Joins 1 Jul
[drag]	[drag]	[drag]	[drag]	[drag]	
(scroll for more cards per column)					

Mobile Layout: Stage columns become horizontally swipeable tabs; cards stack vertically per selected stage.

Components: Kanban columns, draggable cards, stage counters, filter dropdowns (Job, Department, Recruiter), "+ New Role" modal trigger, card detail on click.

User Actions: Drag candidate card between stages (triggers status-change automation + email); click card → Candidate Details screen; filter by job/department.

Empty State: "No candidates yet for this role — share the job link" with copyable link.

Backend APIs: GET /ats/pipeline?job_id=, PATCH /ats/candidates/{id}/stage

DB Tables: job_openings, candidates, candidate_stages

Screen: Application List

Desktop Wireframe:

Applications [Search 🔍] [Filter: Role ▾ Status ▾ Date ▾]					
Name	Role	Applied On	Status	Score	
Riya Sharma	Content Intern	02 Jul	Screened	8/10	▶
Karan Mehta	Sales Exec	01 Jul	Applied	—	▶
...					
Showing 1-20 of 84			[< 1 2 3 4 >]		

Components: Search bar, multi-filter, sortable table, pagination, row click → Candidate Details, bulk actions (bulk reject, bulk email).

Backend APIs: GET /ats/candidates?filters=

DB Tables: candidates, job_openings

Screen: Candidate Details

Desktop Wireframe:

← Back		Riya Sharma – Content Intern	[Reject] [→Next]
Profile	Tabs: [Resume][Assignment][Notes]		
[Avatar]	[Resume PDF viewer embed]		
Phone, Email, College			
Applied via: LinkedIn

Stipend/CTC [_____]	Joining Date [__/__/__]	
Offer Template [Standard Intern Offer ▼]		
[Preview Offer Letter]		
[Live PDF preview panel]		
[Send Offer for Approval]		

User Actions: Select template → fill variable fields → preview → send for internal approval (Dept Head) → on approval, auto-email offer to candidate with e-sign link.

Backend APIs: POST /ats/offers, POST /ats/offers/{id}/send

DB Tables: offers, offer_templates, candidates

Screen: Hiring Analytics

Desktop Wireframe:

Hiring Analytics	[Date Range ▼]	[Export]
Time-to-Hire (avg) 14 days	Funnel Conversion [funnel: Applied→Hired %]	
Source Effectiveness [bar: LinkedIn/Referral...]	Offer Acceptance Rate 82%	

Backend APIs: GET /ats/analytics

DB Tables: Aggregated from candidates, offers, candidate_stages

6.4 Employee Onboarding

Screen: Joining Checklist (HR working view)

- **Purpose:** Single control panel HR uses to move a new hire from "Offer Accepted" to "Active," triggering every automation.
- **Access:** HR (full), Dept Head (view/approve).
- **Navigation Path:** People → Onboarding → [Candidate Name]

Desktop Wireframe:

Onboarding: Riya Sharma (Content Intern) Status: 60%

☒	Employee/Intern ID generated	INT-2026-0142	
☒	Offer Letter signed	[View]	
☒	Appointment Letter generated	[View]	
☒	NDA generated & signed	[View]	
☐	Company email created	[Trigger]	
☐	Welcome email sent	[Trigger]

Backend APIs: POST /onboarding/self/upload, POST /onboarding/self/accept-offer

DB Tables: documents, onboarding_checklist

6.5 Employee Profile

Screen: Employee Profile (Tabbed)

- **Purpose:** 360° record for one person; source of truth referenced by every other module.
- **Access:** Self (own, most tabs editable-request-only); HR (full edit); Dept Head/Team Lead (view, scoped); Finance (Salary tab only).
- **Navigation Path:** People → Employee Directory → [Name]

Desktop Wireframe:

[Avatar] Riya Sharma · Content Intern · Marketing		
ID: INT-2026-0142 · Joined: 15 Jun 2026 · Status: Active		
[Personal][Professional][Bank][Documents][Salary][Attendance]		
[Leaves][Performance][Assets][Projects][Training][Activity Log]		
(Personal tab active)		
Full Name: Riya Sharma	DOB: 12 Mar 2003	
Phone: +91 XXXXXXXXXX	Personal Email: ...	
Address: ...	Emergency Contact: ...	
Blood Group: O+	[Edit] (self/HR only)	

Tab-by-tab content summary:

Tab	Contents	Who can edit
Personal	Name, DOB, contact, address, emergency contact, blood group	Self (request), HR (direct)
Professional	Designation, department, reporting manager, joining date, employment type (FT/Intern), work location	HR only
Bank	Account number, IFSC, bank name, PAN, UAN (masked, reveal-on-click with audit log)	HR/Finance only
Documents	ID proof, offer letter, appointment letter, NDA, education certificates	HR upload; self view
Salary	CTC breakup, allowances, deductions, payslip history	Finance edit; self view (own)
Attendance	Calendar heatmap, monthly summary, exceptions, linked daily timesheets	Read-only (all viewers)
Leaves	Balance by type, history, pending requests	Self apply; manager approve
Performance	KPI/OKR scores, review history, manager comments	Manager/HR edit; self view
Assets	Issued items, issue/return dates, condition notes	Admin edit; self view
Projects	Active/past project assignments with role	Dept Head edit
Training	Completed courses/videos from Knowledge Base, certificates	Auto-logged; HR view
Activity Log	Login history, profile changes, document actions (audit trail)	System-generated, read-only

Mobile Layout: Tabs become a horizontally scrollable chip row under the profile header; one tab's content shown at a time, full width.

Backend APIs: `GET /employees/{id}`, `GET /employees/{id}/{tab}`, `PATCH /employees/{id}/{tab}`

DB Tables: `employees`, `employee_bank_details`, `documents`, `salary_structures`, `attendance`, `leave_requests`, `performance_reviews`, `assets`, `project_assignments`, `training_records`, `activity_logs`

6.6 HRMS / Attendance

Office Hours: 10:00 AM – 7:00 PM, Monday-Saturday (per Settings → Attendance Policies; configurable per department if ever needed). Grace period and late-mark thresholds below assume these hours.

Screen: Attendance — Clock In/Out (Self)

Desktop Wireframe:

Today, 05 Jul 2026	
Office Hours: 10:00 AM – 7:00 PM	
[CLOCK IN]	
Status: Not clocked in yet	
Office Wi-Fi detected: ☒	

After clock-in:

Clocked in at 10:07 AM	
[Start Break] [Clock Out]	
Working time: 06h 48m	

Clock Out attempt **before** timesheet is filled:

 You must fill today's Timesheet before you can clock out.	
[Fill Timesheet Now →]	

Clock Out after timesheet is filled:

☒ Timesheet submitted (8h logged)	
[CLOCK OUT]	
Working time: 08h 53m	

Components: Large primary action button (state-dependent label), live timer, geo/IP validation indicator, break sub-timer, **blocking modal** that intercepts the Clock Out action if `timesheet_submitted = false` for the day and deep-links straight into the Timesheet screen.

Business rules:

- Office hours are 10:00 AM – 7:00 PM. Clock-in after the grace period (e.g. 10:15 AM) auto-flags "Late Mark."
- **Clock Out is hard-gated by the Timesheet:** the `POST /attendance/clock-out` endpoint itself rejects the request (not just the UI) if no timesheet exists for that day and that user, returning an error the frontend resolves into the blocking modal above. This is enforced server-side so it can't be bypassed via API calls, mobile app, browser extensions, etc.
- Optional geo-fencing/IP restriction configured in Settings.
- If someone leaves without clocking out or filling a timesheet, the system auto-locks their session at midnight and flags "Incomplete Day — Timesheet Missing" for manager review the next morning; this does **not** retroactively fill the timesheet — HR/Team Lead can prompt for a late submission the next day, tagged as "Late Timesheet."

Backend APIs: `POST /attendance/clock-in`, `POST /attendance/break/start`, `POST /attendance/break/end`, `POST /attendance/clock-out` (validates timesheets for same-day entry before allowing), `GET /timesheets/today/status?user_id=`

DB Tables: `attendance`, `attendance_rules`, `offices` (for geo/IP), `timesheets`

Screen: Timesheet Entry (Mandatory, End of Day)

- **Purpose:** Capture how each employee/intern's working hours (10:00 AM–7:00 PM) were actually spent, broken down by task/client/project — both for accountability and to feed Payroll, Operations, and Performance with real effort data. This is a **hard gate**: the system will not allow Clock Out until today's timesheet is submitted.
- **Access:** Self (create/edit own, same-day only); Team Lead/Dept Head (view, scoped); HR (view all); Finance (view, for billability/payroll cross-check).
- **Navigation Path:** My Work → Timesheet (also auto-launched from the Clock Out blocking modal)

Desktop Wireframe:

```
| Timesheet — 05 Jul 2026 (Office Hours 10:00 AM - 7:00 PM) |
```

Total logged: 8h 00m / 9h required		[Add Entry +]	
Time	Task / Client / Project	Hours	Notes
10:00-11:30 AM	BrandX Reel Script	1.5h	[] []
11:30-1:00 PM	Team Standup + Content Rev.	1.5h	[] []
2:00-4:30 PM	[Select Task/Client ▼]	2.5h	[] []
4:30-7:00 PM	[Select Task/Client ▼]	2.5h	[] []
⚠ Gap detected: 1:00-2:00 PM unaccounted (lunch/break?) [Mark as Break]			
		[Submit Timesheet]	

Mobile Layout: Entries stack as cards (Time range, Task dropdown, Hours, Notes) with a floating "+ Add Entry" button; running total pinned at top; "Submit Timesheet" as a sticky bottom button that becomes the same button surfaced by the Clock Out gate.

Components: Editable time-block rows (start/end time pickers), searchable task/client/project dropdown (pulled from `tasks` and `crm.clients` so hours can be attributed for billing), hours auto-calculated from time range (editable override for rounding), notes field per row, running total vs. required hours, gap-detection banner, submit button (disabled until total hours reconcile with clock-in→clock-out window, or user explicitly justifies the gap).

States:

- *Empty:* No entries yet — "Log your first block of work for today."
- *Incomplete:* Gap banner shown if logged hours don't cover the full clocked window.
- *Submitted:* Read-only view with "Submitted at [time]" stamp; edits after submission require Team Lead approval to reopen.
- *Late:* If filled the next day after an incomplete-day flag, banner shows "Late Timesheet — flagged for manager review."

User Actions: Add/edit/delete time entries → resolve any gap → Submit → unlocks Clock Out → (if opened directly, not via gate) can review past days' timesheets (read-only after same day ends, unless reopened by Team Lead).

Backend APIs: GET `/timesheets?user_id=&date=`, POST `/timesheets`, PATCH `/timesheets/{id}`, POST `/timesheets/{id}/submit`, POST `/timesheets/{id}/reopen` (Team Lead/HR only)

DB Tables: timesheets, timesheet_entries, tasks, clients

Screen: Team Timesheet Review (Manager)

- **Purpose:** Team Lead/Dept Head/HR view of who has and hasn't submitted today's (or a past) timesheet — surfaces the same gate from the manager side.
- **Access:** Team Lead (team), Dept Head (dept), HR (all).
- **Navigation Path:** People → Attendance → Timesheets

Desktop Wireframe:

    EMPLOYEE_PROFILES ||--o{ ACTIVITY_LOGS : generates

```

Notes on relational design:

- `USERS` is the auth/identity table (email, password hash, role_id, first_login flag). `EMPLOYEE_PROFILES` is 1:1 with `USERS` and holds all HR data — this separation keeps auth lean and lets Interns/Employees share one schema with an `employment_type` enum.
- `CANDIDATES` converts into `EMPLOYEE_PROFILES` on hire (one-way FK `converted_employee_id`), preserving full recruitment history against the eventual employee record.
- `SALARY_STRUCTURES` → `PAYSLEIPS` is 1:many per pay cycle; deductions are computed at payroll-run time by joining `ATTENDANCE` and `SOCIAL_SUBMISSIONS` exception tables, not stored redundantly.
- `LEADS` and `DEALS` are distinct: a lead converts into a deal (CRM) once qualified; this preserves marketing-funnel reporting separate from sales-pipeline reporting.

- `TIMESHEETS` is 1:1 per user per day, with `TIMESHEET_ENTRIES` holding the individual time blocks. The `attendance` clock-out write path performs a `existence/ submitted=true` check against `TIMESHEETS` for that `(user_id, date)` before it is allowed to complete — this dependency is enforced at the API/service layer, not just the UI, so it holds regardless of client (web, mobile, or any future integration).

8. Dashboard Widgets

Widget catalog — each widget is a self-contained component that can be composed per role:

Widget	Data Source	Shown To
Attendance (self clock-in/status)	<code>attendance</code>	Employee, Intern
Attendance (team %)	<code>attendance</code> aggregated	Team Lead, Dept Head, HR
Pending Tasks	<code>tasks</code>	Employee, Intern, Team Lead
Today's Meetings	Calendar integration	All roles
Lead Summary	<code>leads</code> , <code>deals</code>	Sales roles, Founder
Payroll (self payslip / org payout)	<code>payslips</code> , <code>payroll_runs</code>	Employee/Intern (self); Finance/Founder (org)
Recent Notifications	<code>notifications</code>	All roles
Performance (self score / team heatmap)	<code>performance_reviews</code>	All roles (scoped)
Team Status (who's in/out today)	<code>attendance</code>	Team Lead, Dept Head
Birthday Calendar	<code>employee_profiles.dob</code>	All roles
Announcements	<code>announcements</code>	All roles
Headcount & Hiring Snapshot	<code>employee_profiles</code> , <code>job_openings</code>	Founder, HR

Widget	Data Source	Shown To
Revenue/Invoice Snapshot	<code>invoices</code> , <code>payments</code>	Founder, Finance
Social Submission Status	<code>social_submissions</code>	Content roles, Team Lead
Timesheet Status (submitted/pending today)	<code>timesheets</code>	Employee/Intern (self); Team Lead/Dept Head/HR (team/org)

9. Notifications Architecture

Channels: In-app bell, Email, (optional) WhatsApp/SMS for time-critical items, Slack/Discord webhook for team-visible events.

Trigger categories:

- **Transactional (immediate):** Leave approved/rejected, task assigned, offer sent, onboarding step completed.
- **Reminders (scheduled):** Clock-in reminder, daily report reminder (6 PM), social submission deadline reminder, leave-balance-expiring reminder.
- **Digest (batched):** Daily summary to managers (9 AM: team attendance + pending approvals), weekly summary to Founder.
- **Escalations:** Unapproved leave >48h auto-escalates to Dept Head; missed social submission auto-notifies Team Lead + flags payroll.

Data model: `notifications` table (`user_id` , `type` , `payload` , `channel` , `read_at` , `created_at`) + `notification_preferences` (per-user channel opt-in) + `notification_templates` (admin-configurable copy, tied into Settings → Email Templates).

Architecture pattern: Event bus (e.g. domain events like `leave.approved` , `task.assigned`) → Notification Service subscribes → resolves template + channel preference → dispatches via Email/Push/Webhook provider → logs delivery status.

10. Permissions Matrix

Full CRUD-level matrix (C=Create, R=Read, U=Update, D=Delete, — = No Access; scoped roles marked "Own/Dept/Team" where relevant).

    D -->|Yes| F[Manager Completes Review]
    F --> G[HR Compiles Org-wide Performance Report]
```

12. Technical Architecture

12.1 Recommended Tech Stack

Layer	Recommendation
Frontend	React (Next.js) + TypeScript, Tailwind CSS, component library built on top of design tokens (Linear/Notion-style)
Mobile	React Native (shared logic with web) or PWA for v1
Backend	Node.js (NestJS) or Django REST Framework — modular monolith to start, split into services as scale demands
Database	PostgreSQL (primary relational store)
Cache/Queue	Redis (caching, session store, job queue via BullMQ/Celery)
File Storage	S3-compatible object storage (documents, uploads, signed letters)
Search	Postgres full-text search initially; Elasticsearch/OpenSearch if directory/KB search scales
Auth	JWT + refresh tokens; OTP via SMS/email provider (e.g. MSG91, Twilio, SES)
E-signature	DocuSign/Zoho Sign API integration, or custom click-to-sign with audit trail for internal documents
Notifications	Event-driven service (see Section 9) using a message queue (SQS/RabbitMQ)
Hosting	Cloud provider (AWS/GCP/Azure) with containerized deployment (Docker + ECS/Kubernetes)
CI/CD	GitHub Actions → staging → production, with migration gating

12.2 API Architecture

- RESTful API, versioned (`/api/v1/...`), resource-oriented (as reflected in each screen's "Backend APIs" above).
- Auth via Bearer JWT; role and scope embedded in token claims, enforced by a central RBAC middleware on every route (not per-controller ad hoc checks).
- Multi-tenancy-ready from day one (INGLU is single-tenant now, but `organization_id` scoping on core tables avoids painful migration if INGLU ever spins up a sister brand/entity).
- Webhooks exposed for Slack/Discord/Email/Payroll-bank-file integrations.
- All mutating endpoints write to a central `activity_logs` table (actor, action, entity, before/after diff) for audit.

12.3 High-Level Folder Structure (Backend, modular monolith)

```
/src
  /modules
    /auth
    /users
    /recruitment
    /onboarding
    /employees
    /attendance
    /leave
    /payroll
    /performance
    /tasks
    /daily-reports
    /social-submissions
    /crm
    /leads
    /operations
    /assets
    /knowledge-base
    /announcements
    /reports
    /settings
    /notifications
  /common
    /rbac
    /audit-log
    /file-storage
    /events
  /config
  /database
    /migrations
    /seeders
```

12.4 Security Model

- **RBAC** enforced server-side (never trust client-side role hiding alone — sidebar hiding is UX, not security).
- **Field-level masking** for sensitive data (bank account numbers, PAN) — masked by default, "reveal" action logged in `activity_logs`.
- **Encryption**: At-rest encryption for the database and object storage; TLS everywhere in transit.
- **Audit Logs**: Every create/update/delete on HR-sensitive modules (Employee Profile, Payroll, Performance) is logged with actor, timestamp, and diff — visible to Founder/Super Admin under Settings → Audit Log.
- **Session management**: Short-lived access tokens, refresh token rotation, forced logout on password reset, device/session list visible to user under Profile → Security.

- **Rate limiting & logout:** Login and OTP endpoints rate-limited; account logout after repeated failures (already reflected in Login screen states).

12.5 Notification Architecture (Technical Summary)

Event-bus pattern: domain modules emit events → Notification Service consumes → resolves per-user channel preference and template → dispatches (email/push/webhook) → logs delivery/read status. Decouples business logic from delivery mechanics and makes it trivial to add channels (e.g. WhatsApp) later without touching core modules.

13. Future Scope

Not required for MVP, but the architecture above (modular backend, event-driven notifications, RBAC-first) is designed to accommodate these without rework:

- **AI-assisted resume screening & candidate ranking** in the ATS module.
 - **Predictive attrition scoring** using attendance + performance + engagement signals.
 - **Client-facing portal** (extend CRM) so brand clients can view campaign progress/deliverables directly.
 - **Mobile-first intern app** with simplified nav (Clock In, Tasks, Social Submission, Payslip) given interns are majority mobile users.
 - **Integrated content calendar** connecting Social Media Submission Module directly to a scheduling tool (Buffer/Later-style) rather than manual link submission.
 - **Advanced people analytics** (org-wide skill matrix, internal mobility recommendations, campus-to-hire conversion analytics for the Campus Ambassador program specifically).
 - **Multi-entity/multi-brand support** if INGLU spins out sister brands — the `organization_id` scoping already anticipates this.
 - **WhatsApp Business API integration** for reminders and approvals, given the youth-workforce context where WhatsApp adoption may exceed email.
-

End of Document — v1.0. Ready for UI/UX design translation and engineering sprint breakdown.
